

Not Just a Bait, a Real **PUBLIC HEALTH TOOL**

This brand new **Combo Bait**[®] product (the second of a series that we will be introducing to you) is a one-two punch for *Norway Rats*, *roof rats*, *house mice* and *voles*. This bait contains a rodenticide to kill the target animal and a systemic insecticide to aid in the reduction of their fleas.

Until now, there were times when aggressive baiting with traditional rodenticides could actually contribute to disease outbreaks because, when the rodent host dies, their fleas search for some other warm-blooded host. Sometimes they find a pet; sometimes they find a person.

Kaput Combo Bait[®] Pellets significantly reduces that risk and also takes less effort for the Professional. There is one step instead of first baiting for the rodent and then dusting for the fleas.

The first and only product with a rodenticide and a systemic insecticide! And about the same price as a rodenticide alone.

This is a unique product that will show your customer that the industry is not doing business as usual.

PROFESSIONAL TESTIMONIAL

"I just wanted to let you know that I am excited to hear about your new product coming out! Adding a flea insecticide to your Kaput bait is a great idea.

As you know Kaput Rat & Mouse Bait has been the main rodenticide I have chosen for my company for the last couple of years. The mice and voles clean the stations so well it looks like there was never any bait to start with. Good luck with the new product."

RODENTICIDE + INSECTICIDE

Kaput[®] COMBO BAIT[®] PELLETS & MINI BLOCKS

FOR RODENTS AND FLEAS

Patent Pending

the most **INNOVATIVE** rodent control technology

FIRST EVER dual action product for rodents & their fleas

for california ground squirrels

An **UNPRECEDENTED** public health tool.

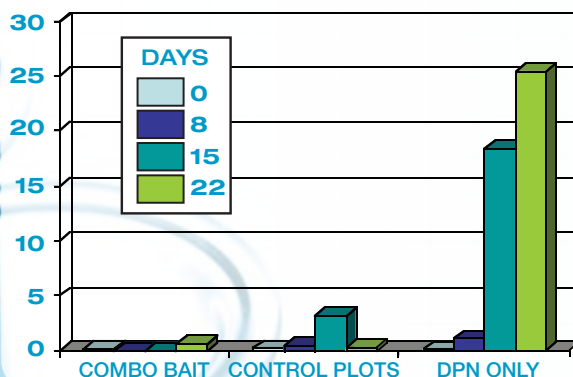

Standard rodent control kills ground squirrels only. After these rodents die, the fleas from the hosts seek other warm-blooded animals for food. These can be pets, wildlife, and humans. Now there is a solution to reduce transference of certain rodent-borne disease, such as plague from rodent to man or animals by controlling ground squirrels and the fleas they carry.

No other products like it on the market **IN THE WORLD.**

Our experienced scientists are working on new ideas for novel approaches to control rodent-borne diseases that have been ignored for years, such as plague, Lyme Disease, and sand flies in the Middle East. We have field rodent research experience in over 60 countries!

Number of fleas near burrow entrances after use of Combo Bait, no-bait Control plots, and 0.01% diphacinone (DPN) only ground squirrel bait. Rodenticides alone trigger dramatic increases in flea numbers near burrow entrances, while searching for new hosts.

- Kills ground squirrels and the fleas they host in one bait
- Eliminates fleas in the burrows and nests of ground squirrels
- Contains 0.0025% diphacinone and 0.025% imidacloprid
- Systemic action of insecticide kills fleas on the squirrels
- Traditional rodent control forces fleas to move to secondary hosts, including pets and humans
- First in a series of products that kills rodents and the fleas they host
